

Sandbox Cover Installation

CSG-6060 - CSG-60120 - CSG-120120

SandLock suggest using a Standard 55cm exercise ball as an easy and effective way to support your sandbox cover. Keeping your cover supported will allow water to run off as well allow cover to breath more efficiently. When installing covers on all sandboxes seats must be removed and can be place in inside of sandbox.

Inflate exercise ball to the proper amount based on the amount of sand in sandbox. The ball will be more effective when not fully inflated and places better in the sand.

- 1- Ball for 5x5
- 2- Balls for 5x10
- 3- 4 Balls for 10x10

Place cover over the ball in sandbox and pull corners down to secure with shock cords. Shock cords should be stretched down into notches on corners and sides of sandbox. Note that shock cords can be adjusted for tightness by moving knot in cord.

Vents in cover provide air flow when cover is in place.

Shock cord attachment. Securely keep cover in place.
